# Roofline Range

The Classic range of Roofline products will ensure that repainting becomes history. Not only will our range of soffits and fascias save you time, they will also improve the kerbside appeal of your property and are available with suited guttering and downpipes.

Timber soffits and fascias need maintaining and overtime will eventually need to be replaced - no matter how much effort has been made to maintain the quality of the timber; the rot will set in and cause damage to other parts of your property.

Classic Roofline Soffits and Fascias will eliminate all these problems. As long as the PVC roofline products are attached to sound roof trusses they will last a lifetime:

- Full removal and replacement of roofline – ABSOLUTELY NO OVER CLADDING.
- Concealed ventilation – Prevent the build up of moisture in the roof space.
- Eaves protection system – Which channels excess water into guttering rather than house structure.
- Integrated 'Bird Comb' – A safe, yet effective barrier to birds nesting in the roof space.
- All backed by a full 10 Year guarantee plus the addition of a 50 year manufacturers guarantee on all white products.

After fitting Classic roofline products you can rest assured that the ladders will not be needed to climb the gable end with a paint brush in hand again. We install concealed ventilation preventing the build up of moisture in the roof space.

All fascias and soffits are available in 6 colours. This is further enhanced by a range of decorative features and gables.

## No more painting

With all ancillary products such as end caps, corners and even guttering matching your chosen profile, the Classic Roofline range will transform your roofline for the lifetime of your property.

Roofline will not only add value and add to the saleability of your property with enhanced looks, but is also a low maintenance selling point. Roofline is not only for the present but will help you sell your property if you choose to in the future.

## Guttering & Downpipe Choices

	White	Black	Brown	Caramel	Grey
Ogee					N/A
Deep-flow				N/A	
Half-Round				N/A	N/A
Square-Line					N/A

Imagine the  
difference  
that cladding  
could make

Traditional timber cladding is renowned for being difficult and time consuming to maintain. If your property has external cladding you could be spending valuable leisure time sanding, cleaning and repainting the exterior of your property. Additionally, old rendered buildings can benefit from HardiePlank® cladding system – no more re-rendering, painting and maintenance.

Classic cladding systems are available in twenty one different colour options. Combined with soffits and fascias your property could become virtually maintenance free giving you more time, and ultimately relaxation.

## HardiePlank® Cladding

HardiePlank® cladding is a versatile weatherboard that offers the texture and natural beauty of timber whilst delivering the maintenance-free durability of fibre cement.

Available in an extensive range of colours, plus a choice of two textures, HardiePlank® can also be installed horizontally, vertically or diagonally, providing the flexibility to create any design. HardiePlank® works equally well as a 'full wrap' cladding solution or as an accent that complements traditional building materials such as stone, wood and brick.

With ColorPlus™ Technology, the long lasting durability provided by HardiePlank® offers major advantages over conventional cladding materials, providing ease of installation, design flexibility and enhanced durability.

Made from an advanced material that's five times thicker than typical vinyl cladding, HardiePlank® is fire, moisture, rot and pest resistant. It's unaffected by rain and hail damage and can be installed to withstand winds of up to 150 mph.

From classic to contemporary, there is a HardiePlank product that will help you achieve the perfect look and finish for your project.

### Weatherboard Colours

- All products are manufactured to the relevant British Standards and come with BBA approval.
- Weathering – extensive sun testing carried out with no discolouring Formulation uses a non lead process
- Does not produce CFC's, or contain lead, cadmium or barium.

## Firestone RubberCover

The Firestone RubberCover System is based on EPDM roofing membranes that are made of a synthetic rubber compound. For more than 30 years Firestone EPDM membranes have been installed on commercial and industrial low slope roofs worldwide offering proven field performance. Today these proven membranes are also available for residential roofing applications. This means you can choose the Firestone RubberCover system safe in the knowledge that a vast amount of industrial experience and knowledge guarantees long lasting, quality performance.

### Uses

Given the extensive industrial experience and the resultant development of the product, Firestone RubberCover is an ideal, high performance system for a variety of flat roofing applications around your home:

- Building extensions
- Verandas
- Garages
- Carports
- Garden Sheds
- Dormers

## Unique design

A built in watercheck kerb on the fascia edge trim assures the rainwater is diverted towards the gutter edge.

The specially formulated Permaroof sealant or a closed cell foam tape is used between trim and membrane to provide a seal and polypop pins are used to mechanically fix from the outside vertical edge ensuring the membrane is not penetrated.

Along the gutter edge the membrane is sandwiched between a pre-installed backplate and a front cover clip ensuring a 100% water tight seal with no penetrations.

## The finishing touch

The Permaroof System has been designed especially for single-ply flat roof membranes to compliment UPVC fascias and guttering fixed on domestic properties.

It is the finished edge which is seen from ground level so it's important it looks neat and blends with the existing roofline.

It has also been designed with the installer in mind, all the component parts are fitted with ease and with the option of using longer lengths and fewer joints, so fitting time is reduced considerably.

## Manufacturing process

Both the fascia edge and gutter edge are extruded using virgin plastic ensuring colour fast, non brittle, identical profiles.

Corner pieces and blank ends are injection moulded using state of the art manufacturing technology.

The manufacturing process is BSI quality assured accredited to 99.99% accuracy.

Our ethos at Classic is to provide top quality products and a truly excellent customer service which is normally lacking in the Home Improvement sector.

Starting in 1992 Classic have grown from a one man band to become one of the largest independent Home Improvement Companies of its type in East Anglia.

Whatever you need, please contact us to speak to or arrange a visit from one of our very experienced sales advisors. Once you receive your free quotation you're under no obligation and we won't keep troubling you for a decision.
